

Cleaning and Maintaining a SASE Signature Floor System™

Every floor requires some sort of routine maintenance. Polished concrete is no exception, however it does have a huge advantage over other flooring systems. It does not require the use of expensive waxes and the high labor cost associated with maintaining expensive petroleum based flooring. We have outlined some simple and cost effective procedures to maintain your SASE Signature Floor System™.

Daily Care:

- Dust mop daily with a microfiber mop head
- Floors should be cleaned with an auto scrubber
- Use warm water or SASE Cleaner in auto scrubber
- Use a SASE Sapphire Pad

Periodic Care:

- Use a high-speed burnisher 2 - 4 times a year
- Burnish with a SASE TRIFECTA pad
- High traffic areas may need to be burnished 4 times a year
- Low traffic areas may need to be burnished 2 times a year

Annual Care:

- Apply SASE Protective product (*Protect, Protect Plus, or SPR3*)
- Burnish floor with a SASE TRIFECTA pad
- High traffic areas once a year
- Low traffic areas every other year
